GEISTER

Linvasive™ X

SPECIALIST

25 YEARS MICS

This flagship product line developed in collaboration with Prof. Dr. Mohr represents a milestone in MICS surgery and remained an internationally recognized benchmark throughout the years.

The better way to operate™

GEISTER

Linvasive™X

MINIMAL – LESS – LEAST – LINVASIVE™ - ACHIEVE SMALLER APPROACHES. HANDLE GREATER CHALLENGES.

Striving for little, less, more less and least - the relentless pursuit of improvement and excellence in Minimally Invasive Precision Surgery. The better way to operate™ - this philosophy drives us to refine techniques, reduce invasiveness, and achieve optimal outcomes with minimal impact, ensuring patients benefit from the most advanced and precise surgical care. A testament to the ongoing evolution of surgical technology, combining innovation with practicality to redefine minimally invasive surgery. By providing unparalleled access, precision, and efficiency, it empowers surgeons to achieve better outcomes while prioritizing patient comfort and safety. This cutting-edge system is poised to become an indispensable tool in the future of surgical care.

THE RESULT OF MORE THAN 25 YEARS OF EVOLUTION AND EXCELLENCE IN MINIMALLY INVASIVE PRECISION SURGERY

During the procedure, a small incision is made, and optionally a special retractor is inserted. The retractor blades are meticulously adjusted to create a controlled access point. Unlike conventional endoscopic or laparoscopic instruments, the Linvasive™X system eliminates the constraints of working through a trocar, allowing for stronger jaw or tip angles and greater flexibility. The Linvasive™X instruments feature a unique, ergonomic handle designed for enhanced precision with a unique patented ratchet system for needle holders. With intuitive fingertip control, improved rotation, and superior maneuverability, these instruments are ideal for procedures demanding exceptional accuracy and finesse. Color coded handles provide for easy identification in the OR. This combination of advanced functionality and user-centric design makes the Linvasive™X system the preferred choice for surgeons seeking maximum precision and efficiency in minimally invasive surgeries.
